STATEMENT OF RELEVANCY

In the attached Japanese Office Action, the Examiner states that WO 00/021236 shows that information corresponding to data block quality with more than three levels by an ACK/NACK signal obtained by a reception side is reported to a transmission side; WO 00/010348 shows that it is determined whether or not a received packet is stored for being combined with a re-transmission packet based on reliability of the received packet; and JP05-110539 shows automatic re-transmission control in which reception data quality is fed back to a transmission side and transmission parameter control is carried out on the transmission side.
